

Panacea Services for Business Objects

Access and optimise the true value of your organisation's data for real business benefit!

Panacea have developed a full range of Professional Services modules for Business Objects that are designed to minimise risk, ensure successful projects and deliver rapid return on investment. The modules cover **CONSULTANCY, EDUCATION and IMPLEMENTATION SERVICES.**

Panacea's experienced consultants can work in both an advisory capacity or help manage the whole project - from start to finish.

The technology

Many customers with an existing infrastructure take advantage of Business Objects technology to access data in a wide variety of environments - CRM solutions, ERP environments and production and data warehouses. Our consultants are experts in Business Objects design and build techniques and offer in-depth knowledge of pure technology implementations.

Data accessibility is key

Pulling data together from a variety of host environments is often critical to the delivery of a focused business intelligence solution. Panacea can employ our skills in areas of database tuning, data transformation and design and communications with intranets and extranets in order to ensure that the delivery of information to the key decision makers is achieved in a timely manner - even on the largest databases.

Panacea skills

Panacea's professional services staff can make a positive contribution to a wide variety of projects:

- Implementation of Business Objects technology into existing transaction systems from **Tier 1** providers such as SAP, People Soft, BAAN and Oracle, to **Tier 2** and **Tier 3** solutions
- Design and customisation of existing universes
- Specification and building of specialist data marts
- Deployment to large user populations via existing LAN/WAN
- Broadcasting information via web, pager, SMS text or e-mail
- Performance testing.
