

# Panacea Health Check Module

*Safeguard your Business Objects investment by demanding optimal performance!*

The utilisation of a business intelligence environment will adapt and develop organically over time with responses to user requirements, technology updates and infrastructure changes. Due to this, a regular Business Objects health check is highly recommended.

The health check is essentially a means of identifying areas which are not functioning optimally and, as a result, impacting your IT investment.

### What are the benefits of a health check?

The health check report gives confidence to the users that they are making the most of their investment in Business Objects technology, that the system is performing efficiently, and is able to scale and respond to future business demands.

### What does a health check consist of?

Panacea will undertake to:

- Check connectivity to data sources
- Check the universe to ensure objects are semantically correct
- Check key reports to ensure they provide the required data
- Examine the security model and repository structure
- Check the user response times to key queries and investigate any anomalies.

### How long does it take to perform a health check?

A health check review and documentation report is delivered on most systems in three working days. Very large systems in terms of scope and complexity require longer periods to perform detailed review and analysis.

### What about documentation?

A full written report will be submitted on the system under inspection, its usage of product and other related technology features and its ease of use and usage patterns. The key to the health check is the delivery within the documentation of recommendations for any changes or additions and budgetary costs as well as the benefits of the changes.
