

# Panacea Software Development Services

Delivering proven @-business and systems integration solutions

Panacea's SOFTWARE TECHNOLOGY DIVISION has been providing creative, business enhancing solutions for more than 14 years.

In that time we have built a broad set of software skills with outstanding depth. Our team is one of the most mature in the industry with more than nine years software development experience per team member.

Panacea's software technicians can offer accountability for a project or act as part of a project team. We can provide spot solutions - offering advice or knowledge transfer - or completely manage an outsourced project.

If you have need of Panacea's comprehensive development skills, please call your Account Manager or Panacea's Director of Software Technology to discuss how we can help.

Many companies claim to be leaders in e-business solutions but most offer only spot solutions. Panacea's **Software Technology Division** however, offers truly proven business-to-business e-business development skills.

Having developed our range of **AMERIGO e-business applications** over the past three years, we have learnt more than most about what works and what doesn't in the world of e-business.

We have always developed our e-business solutions to offer the **resilience, security** and **performance** of mission critical business systems... hardly surprising given our long and successful history in the development of database-oriented transaction processing and business intelligence solutions. We have built upon these skills using the latest three tier, distributed application architectures and topped the lot with exciting graphical design skills to maximise the enjoyment and impact of using our solutions.

Whereas many companies promise attractive websites we consider this to be just the tip of the iceberg. All our solutions provide integrated e-business processes that **minimise administration costs, improve efficiency** and **customer satisfaction** and offer greater **client and supplier lock-in**. And they work in the real world! Dealing with locked tables, failed connections, server failures and low-bandwidth client interfaces.

**Creativity + Productivity + Accountability =  
The Ability to Deliver!**

## Software Development Division

*"True Leaders in the Development of Integrated E-Business Solutions"*

### Database, systems integration and business intelligence skills

The database is at the heart of almost every modern business. Databases store corporate information and can be a powerful source for competitive advantage. Panacea's Software Technology team has extensive experience of working with Oracle, Microsoft and Informix databases on UNIX and Microsoft platforms. Because we don't simply specialise on one database we are able to provide key systems integration skills between databases. Since most companies have more than one database this cross-platform awareness is vital if administrative costs and errors are to be reduced as data is transferred between systems.

Panacea can integrate systems using combinations of programming skills using Microsoft, Oracle and Informix development tools, XML or using an ETL tool such as Informatica or Scribe to provide more controlled integration in particularly complex environments.

If your requirements extend beyond systems integration, Panacea's Software Technology team is well placed to help with Business Intelligence solutions.

Having developed data warehouse solutions since long before the term was coined we are well placed to understand the business drivers and to plan and develop a working data warehouse in the shortest possible time. Using the latest tools from Microsoft, Informatica and Business Objects we can help transform data into knowledge accessible both within your organisation and, through the web, externally too.

### Software development

If you simply need skills to deliver business applications or to tailor an application to better meet your needs then Panacea's skills in C, C++, Microsoft Visual C++, Visual BASIC, COM, DCOM, ASP, Oracle Developer, Oracle PL/SQL, Informix 4GL, Informix New Era and XML could be what you need to deliver a complete solution, mixing and matching tools to provide the optimum result.

Our development skills are backed by solid procedure. The team has been TickIT and ISO9001 accredited since 1993 and our procedures are constantly reviewed and amended to reflect the needs of new technology such as Web development and BI solutions.

### Summary

Panacea's Software Technology Division offers a truly first-class blend of experience and flexibility. Few software houses offer such an outstanding level of experience across the world's leading software tools and fewer still have access to the broad range of additional skills offered by Panacea's other business and technical divisions. If you need skills in any of the following areas or if you need someone to advise on the best way to deliver a solution to your needs please do not hesitate to call Panacea.

### Skills Summary

#### ■ Databases:

- Microsoft SQL Server
- Microsoft Access
- Oracle Database
- Informix C-ISAM
- Informix SE
- Informix DSA

#### ■ Development Skills:

- Microsoft Visual BASIC
- Microsoft Visual C++
- C++
- C
- Microsoft Access
- Microsoft ASP
- Microsoft VBA
- Microsoft COM/DCOM
- Visual Studio
- Visual Studio.NET
- Oracle Developer
- Oracle PL/SQL
- Informix 4GL
- Informix New Era
- HTML / XML
- Javascript
- Macromedia Dreamweaver & Fireworks
- Lotus Notes / Domino

#### ■ Business Intelligence:

- Host Integration Server
- Business Objects
- Informatica
- Scribe
- Crystal Reports
